The most common indication for decompression of the facial nerve at the internal acoustic meatus is the Bell palsy. The aim of this study is to evaluate the short-term surgical results in a retrospective study of patients who underwent middle fossa approach decompression of the facial nerve, mainly in the clinic. Thirty patients underwent a middle fossa decompression of the facial nerve between 2010 and 2014 in the clinic. The patients' records were retrospectively analysed, and the patients were asked to answer a questionnaire. The responses of the 30 patients were assessed. The most common indication for surgery were the Bell palsy and the facial paralysis. The average age at the time of the surgery was 47 ± 18.4. The average duration of the facial palsy before the surgery was 4.0 ± 3.1 weeks. An improvement of two or more points in House-Brackmann was noted in 28 of the patients. The majority of patients had an excellent function. Facial nerve decompression at the internal acoustic meatus is an effective surgical procedure for the treatment of Bell palsy and facial paralysis. The high success rate is in accordance with the literature. The results in the present study suggest that the middle fossa approach has its benefits.Q: Finding the area under $f(x) = \sqrt{x}$ using Riemann sum $$\int_0^1 f(x) dx$$ I start by breaking up the interval into k sub intervals, each of length $\frac{1}{k}$, and using the Riemann sum, get $$\sum_{i=1}^k \frac{1}{k}f(\frac{i}{k}) \left(\frac{i-1}{k} \right) = \frac{1}{k} \sum_{i=1}^k f(\frac{i}{k}) \left(i-1 \right)$$ Now I'm not sure how to use this. I looked at the hint that they gave me at the end of the problem but I couldn't make sense of 50b96ab0b6

Fig.In the first volume of the third season of Black Mirror, we traveled to a future where a global culture of extreme forms of entertainment is forced on everybody. In Black Mirror: Bandersnatch, we return to the show's concept of choices and consequences, but now we see it applied to a much broader scope. As with most non-linear time dramas, Bandersnatch is a computer-made video game. To play the game, the player chooses to jump into a black mirror version of their own life and make choices. As the titular Bandersnatch, this

is just the beginning: as the player works their way through the game, the choices they make eventually lead them to choose several other paths to play. Bandersnatch is not a digital adaptation of a play. Instead, it is a full-fledged TV show with characters, plot, and overall narrative structure. Indeed, there are more than 200 choices that the player has at their disposal, including multiple endings that I'd only heard of in a video game if I hadn't actually played them. Despite the technology behind it, Bandersnatch is still most easily described as a Choose Your Own Adventure-style book. Why do I say that it's not a digital adaptation of a play? Because it really isn't. Although the choices are inspired by the choices characters make in books like When Harry Met Sally or The Shining, the different paths that the player can take through the video game are all unique, unexpected, and completely outside of the reach of the original source. This is most apparent in the ending, which is a totally original creation and much more similar to an original-story novel than to an existing pop-cultural reference. Bandersnatch is still a Choose Your Own Adventure book in that, for example, you start in the middle of a story, and then pick a choice that's presented to you at the end, and then you're teleported into another. But then
